**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burns et al (US Patent 5,999,838) in view of Fang (US Patent Application 2002/0057227).

Burns et al disclose, in figures 4 and 5, an antenna device comprising a pair of orthogonal monopole antennas (50,51) arranged to form a letter "V" with an angle of 90 degrees and fabricated on a printed circuit board, see column 4, lines 63-65, a ground 53 having an apex of 90 degrees and the antennas arranged to form the letter "V" at the apex of the ground.

The patent to Burns et al differs from the claimed invention because it does not disclose the high frequency circuit. Fang discloses, in figures 1 and 2, comprising an antenna coupled to a high frequency circuit. Figure 2 show an antenna having apportion of meandering shape. Since one of ordinary skill would have recognized the benefit of producing a high frequency band, it would have been obvious to employ the antenna device of Burns et al with the high frequency circuit as taught by Fang. Regarding claims 2 and 3, the hybrid power circuit is well known in the communication device and therefore it represents an obvious expedient.

3. The patents to Mailandt et al, Perkins, and Sindler are cited as of interest showing the antenna similar to that disclosed.
